Welcome to the World of Tyco.

In a very real sense, the World of Tyco has taken us forty-nine years to create. And we're proud that it's been well worth the effort.

The pictures on these two pages tell their own story. A story of people who care. And a story of product *value*. That word may seem old fashioned today, but it's a word we started with, and we've never forgotten it.

These things have helped us to achieve leadership in a competitive industry. Today, Tyco is America's largest manufacturer of electric trains, and the only company that builds a full line of both HO scale racing cars and trains. In fact, we're the most experienced and the largest manufacturer of HO electrics in the nation.

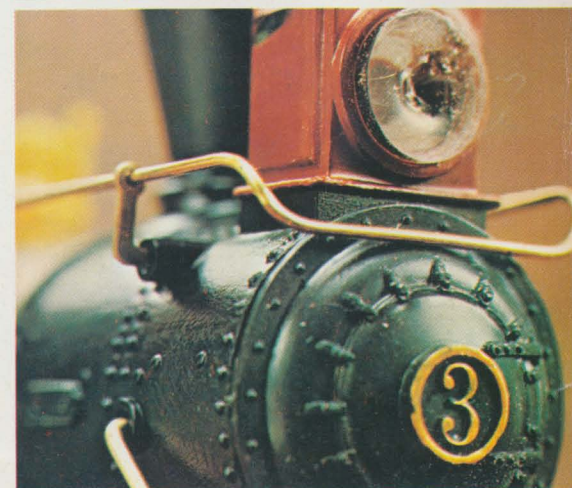

And while we became a part of Consolidated Foods Corporation just five years ago, we feel very much at home with an organization whose motto is *Responsive to Consumer Needs*.

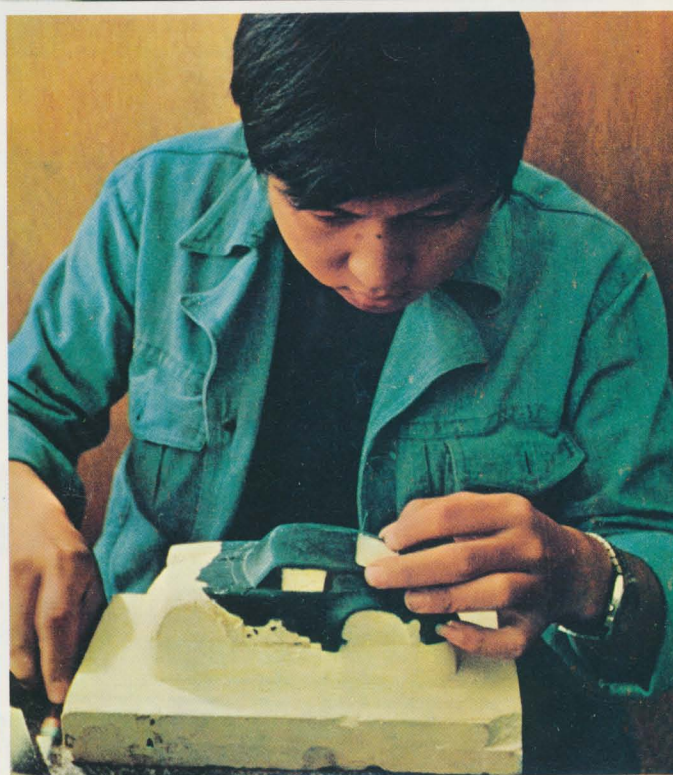

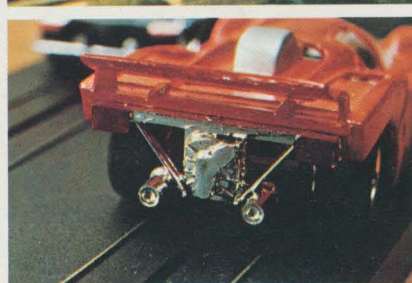

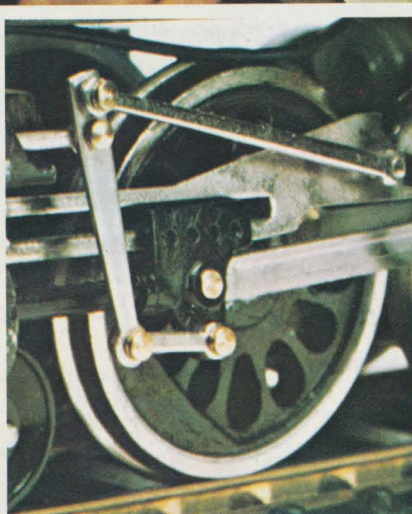

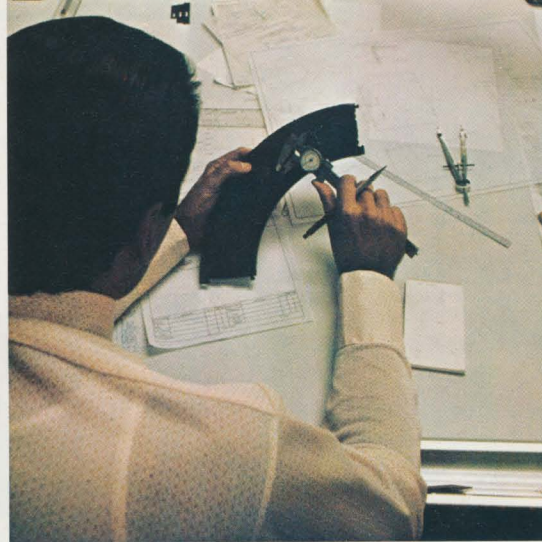

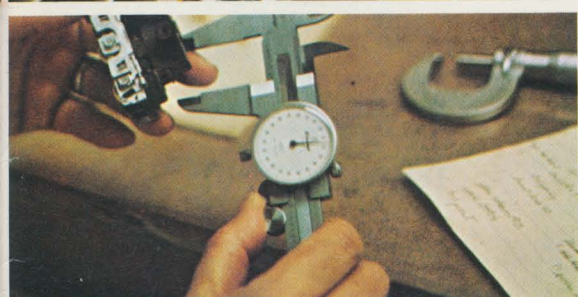

Because the word *responsive* describes the attitude of our people. The people who built the World of Tyco. The people who continue to make it run.

And being responsive assures other words. Like quality. And value. And these too are words that can only be brought to life by dedicated people.

So welcome to the World of Tyco.

It's a mighty big world now. But we take our work just as seriously as we did when John Tyler built our first product in a small garage in New Jersey forty-nine years ago.

Introducing the Layout Expander System.

For the first time, there is an easy way to enjoy the hobby of model railroading. A way that does not require special skills. With the Layout Expander System, you can build the exciting Railroad Empire that you see here, in just 4' x 8' of space. And you don't need to become an expert at anything. Most important, you can do it in easy stages.

Take a close look at this layout. Each component in it is individually available. The more you add, the more fun you have. And every component is performance matched to the layout.

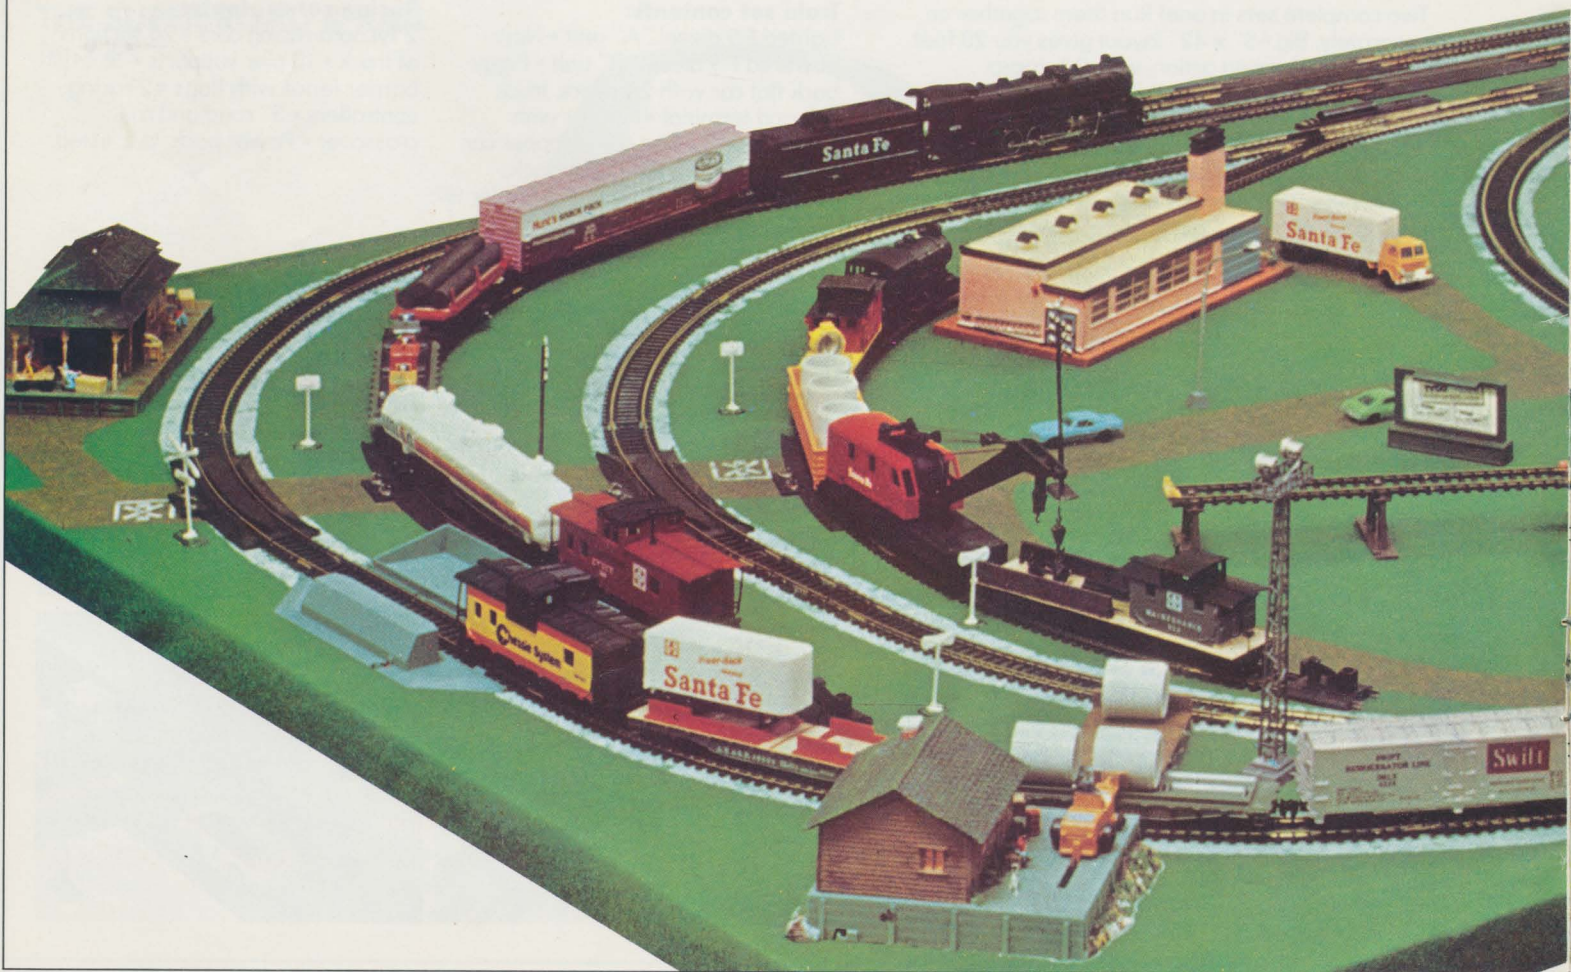

With the complete Layout Expander System, you can operate up to four trains. You can control two trains at a time independently, and you can switch any of the four trains among any of the three mainline tracks.

You have remote control switching, blocking and uncoupling. You can unload freight—logs, ore, crates, pipe—by remote control. You can even unload a piggyback trailer from one train and load it onto another—all by remote control.

This Instruction Manual is what makes it all possible. It has 32 pages of step-by-step instructions with easy-to-follow diagrams and illustrations. You can obtain it at your Tyco dealer. Or send one dollar to Tyco Customer Service, Moorestown, New Jersey 08057.

The easiest way to start your Railroad Empire is with the Track Layout Expander (Stock #7901). Here in one package is *everything you need* to expand any circle of track to a 4' x 8' double oval track layout, wired for 2-train operation (one train at a time with a single power pack). The Instruction Manual is included. See Page 14 for contents.

POWERTORQUE DRIVE

After four years of development, we've come up with a whole new way to go. Our new Powertorque drive couples unprecedented power and traction with the smoothest starts and stops ever. So it climbs easier, pulls more, keeps cars on the track better. And still it used 20% less current than conventional motors.

*Powertorque on Diesels No. 228, 235, 243, 244 and 246.

TYCOPRO 2 PACKAGING

CLASSIC MODEL CAR KITS BY POCHER D'ITALIA

What makes them worth up to \$200 are their incredibly authentic components. And the incomparable satisfaction of building them.

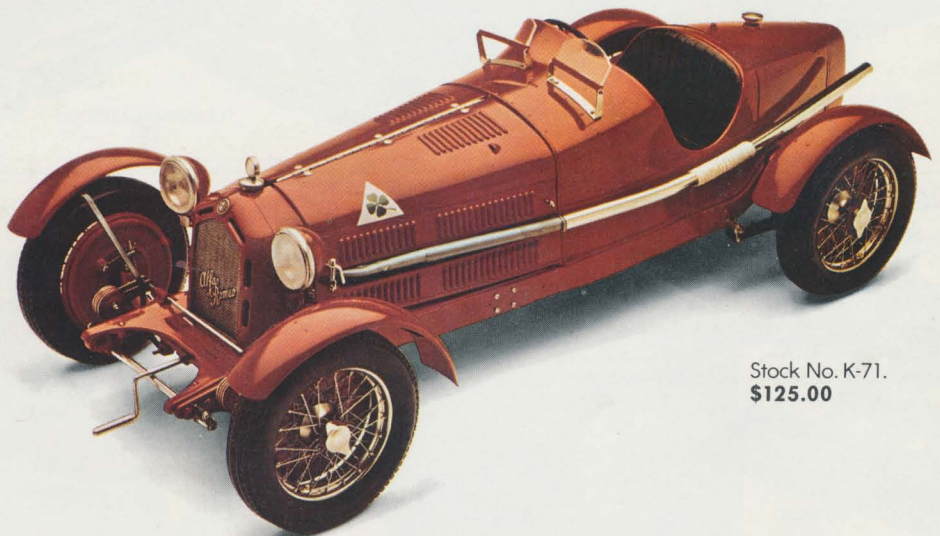

Stock No. K-72.
\$200.00

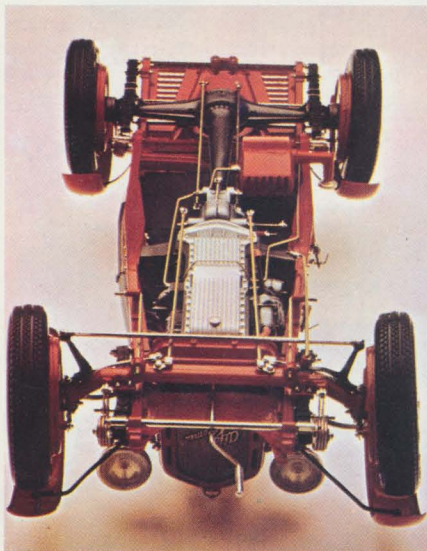

THE ALFA ROMEO 8C (1931-34) 2300 Monza

Exactly 1,452 Parts. Fashioned from brass, stainless steel, copper, and special high-impact plastic.

Working components: The starting handle actually cranks and activates the driveshaft, rods, and pistons. • Steering, brakes, and suspension all work realistically. • The headlights actually work.

Stock No. K-71.
\$125.00

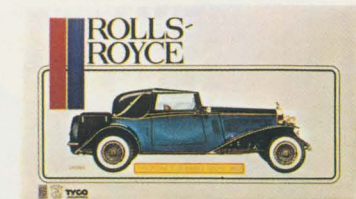

Not many get the chance to own a classic. Even fewer get the chance to build one.

These perfect reproductions in precise 1/8 scale are the ultimate automobile model kits. The cars which can be built from them are museum quality reproductions, authentic to the tiniest detail.

There are four kits available: each of them a car that has become part of history. Automobiles which, in their day, represented the epitome of accomplishment. And model kits which, in smaller scale, represent the same.

Each part is a faithful copy of its original counterpart. The design of each is taken from the original factory blueprints and engineering drawings. Many of the same materials are used: brass, iron, copper, stainless steel.

And the parts are put together with bolts

THE ROLLS ROYCE PHANTOM II (1932) Drop Head Sedan Coupe

Exactly 2,199 Parts. Fashioned from iron, stainless steel, brass, leather, special high-impact plastic, and rubber.

Working components: The steering and suspension are operational. • The brake pedal operates on the four wheels, the hand brake is independent and operates separate brake-shoes on the rear wheels. • Headlamps are lit from the dashboard. • The drop head hood, bonnet, and luggage rack can be opened. • The side windows can be opened by turning the handles. • Crankshaft with connecting rods, pistons, and gudgeon pins operate by turning the starting handle. At the same time, the fan, generator, and magneto are also driven by means of a V belt.

and screws; no special tools are needed. There is very little cementing required, and no painting is necessary, unless you decide to spray on your own distinctive color combinations.

Practically everything that moves on the full-size cars is operational on the models. The brakes work when you press the pedal. The suspension and steering work. The headlights switch on from the dashboard on three of the models. The doors open and close and lock. Side windows on the Rolls Royce roll up and down. Even parts that can't be seen are there and functional.

So they really shouldn't be called model kits at all. They're jewel-like replicas. So precise that some of their beauty can only be seen by the individual who puts them together.

For example. The original Fiat F2 which won the Grand Prix de France in 1907 had a
